5. Fruit and vegetables are known to be one of the most important elements of a healthy diet. There exists a proposal for the introduction of a new fruit and vegetable subsidy for low-income households or those with poor health or at risk of disease. This would be delivered in the form of a voucher that could be redeemed for reduced-cost fruit and vegetables. Would this be a good investment by government to help address diet-related illness in lower-income people?

6. Thinking about this fruit and vegetable subsidy, in the US there is a widespread program through which doctors can prescribe low-cost fruit and vegetables to low-income people vulnerable to diet-related illness as a way to treat and prevent these illnesses. To what extent do you support this as an approach to pursue in Canada?
