**Ipsos MORI** 

### **Turnout estimates**

- As we have noted before, estimating turnout is one of the hardest challenges when relying solely on survey data. Despite the changes we have introduced to our methodology since 2015, which we believe have made our samples more representative, polls may still be more likely to interview politically engaged people than those who are disengaged, people may over-estimate their likelihood of voting, and they may think they are registered when in fact they are not. For post-election analysis we have the advantage of knowing how many people turned out in the end, but we still have to identify them in our data on the basis of the answers they gave before the election. This means that the turnout estimates given here should be treated with particular caution, including taking into account the voter validation results from the British Election Study when these are published (in previous elections these have shown a similar pattern to our estimates).
- The turnout figures in these charts express turnout as a % of all resident adults, which is what our sample is based on. This gives a figure lower than the "official turnout" figures usually used, which is a % of the number of names on the electoral register (as not everyone in Britain is registered, and some people may be registered twice even though they can only vote once). The two measures should not be confused. We have also provided a figure for all those registered in the <u>full analysis on our website</u>, however for the reasons expressed <u>here</u> we believe the figures based on all adults are both more reliable and more meaningful.

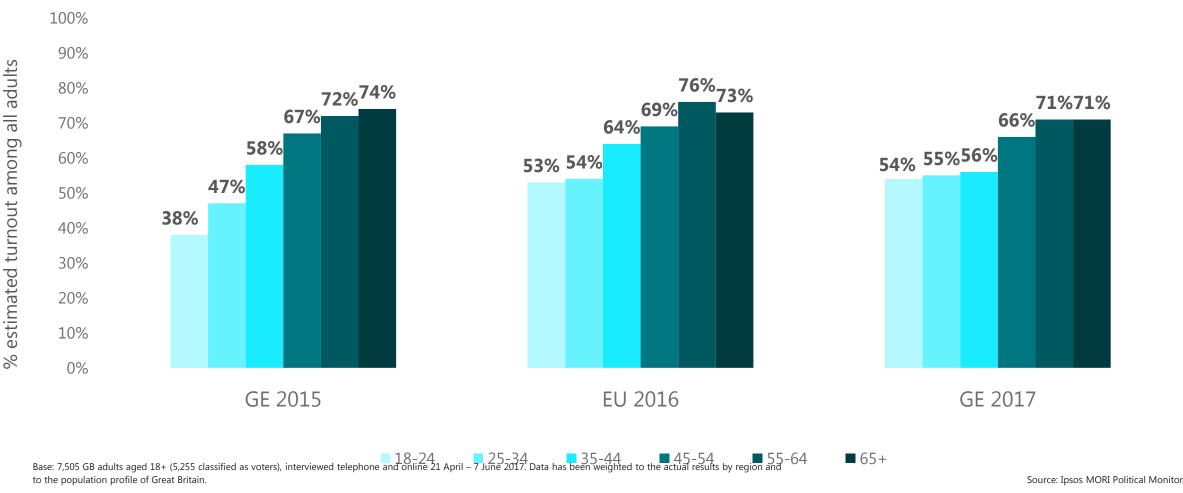

#### Older people are still more likely to vote than younger people

Base: 7,505 GB adults aged 18+ (5,255 classified as voters), interviewed telephone and online 21 April – 7 June 2017. Data has been weighted to the actual results by region and to the population profile of Great Britain.

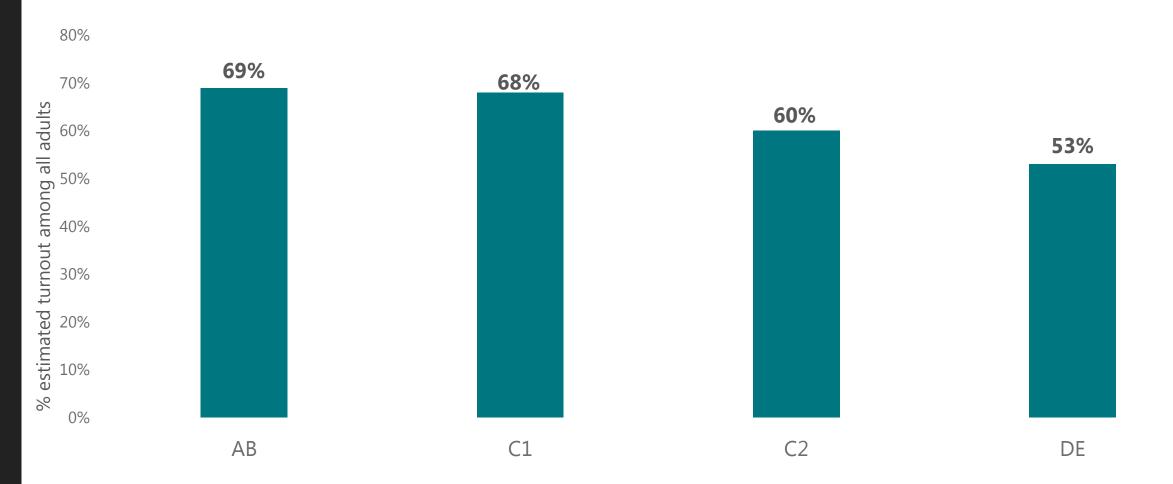

# However the turnout gap has narrowed (which started in the 2016 EU referendum) – young people were more likely to vote in GE2017 than 2015

Ipsos MORI

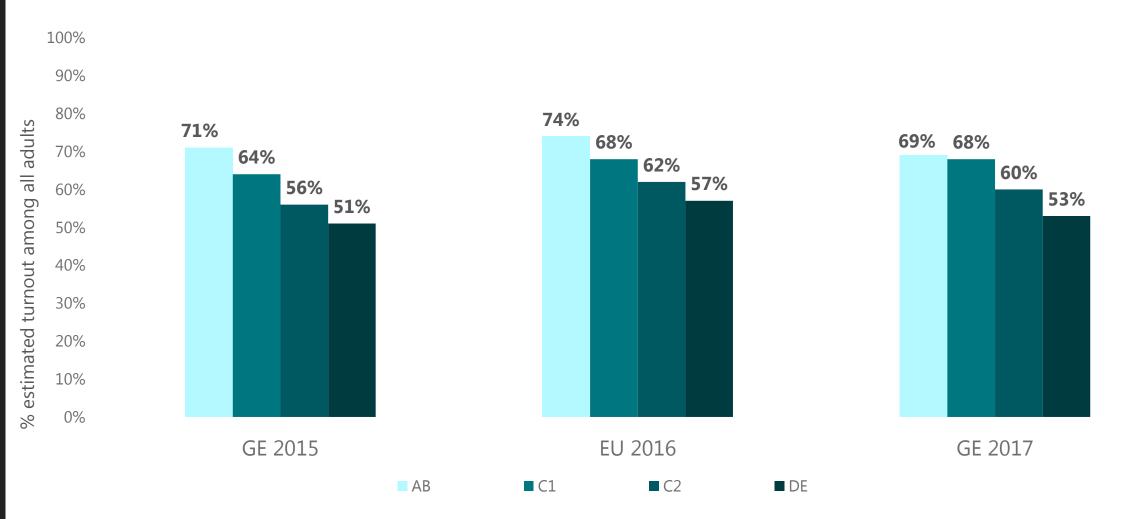

#### Social classes ABC1 remain more likely to vote than classes C2DE

Base: 7,505 GB adults aged 18+ (5,255 classified as voters), interviewed telephone and online 21 April – 7 June 2017. Data has been weighted to the actual results by region and to the population profile of Great Britain.

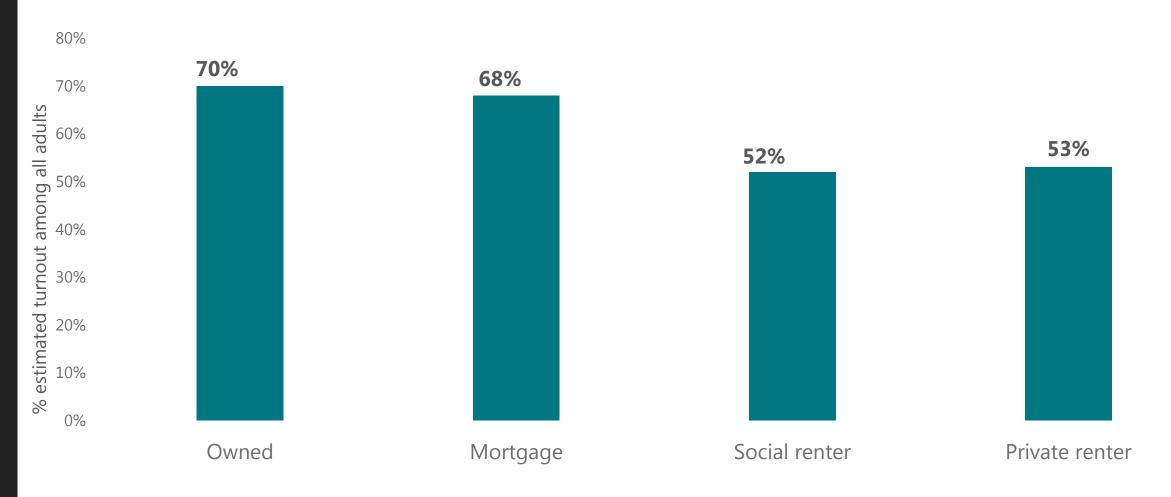

#### Turnout among social classes C1C2 slightly higher than in GE2015

Base: 7,505 GB adults aged 18+ (5,255 classified as voters), interviewed telephone and online 21 April – 7 June 2017. Data has been weighted to the actual results by region and to the population profile of Great Britain.

#### **Owner-occupiers more likely to vote than renters**

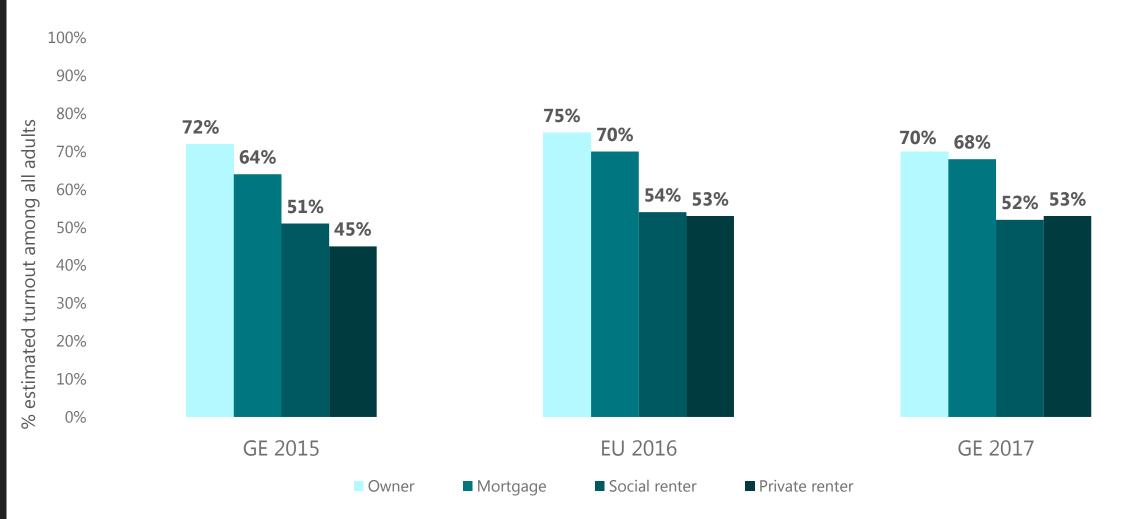

Base: 7,505 GB adults aged 18+ (5,255 classified as voters), interviewed telephone and online 21 April – 7 June 2017. Data has been weighted to the actual results by region and to the population profile of Great Britain.
