Methodology

- The findings in the report come from two surveys conducted on Ipsos's Global Advisor platform.
- The first and main survey (questions reported in sections 1-5 of the report) was conducted May 22-June 5, 2020 in 27 countries among 18,998 adults aged 18-74 in the United States, Canada, Malaysia, South Africa, and Turkey, and aged 16-74 in 22 other markets: Argentina, Australia, Belgium, Brazil, Chile, China (mainland), France, Germany, Great Britain, Hungary, India, Italy, Japan, Mexico, the Netherlands, Peru, Poland, Russia, Saudi Arabia, South Korea, Spain, and Sweden.
- The second survey (question on social and civic engagement) reported in section 6) was conducted June 19-July 3, 2020 among 20,047 adults in the same 27 countries plus Colombia (aged 16-74) and Israel (aged 18-74).
- The samples in each of Australia, Brazil, Canada, China (mainland), France, Germany, Great Britain, Italy, Japan, Mexico, Spain, Sweden, and the U.S. consist of approximately 1000 individuals and those in each of Argentina, Belgium, Colombia, Chile, Hungary, India, Israel, Malaysia, the Netherlands, Peru, Poland, Russia, Saudi Arabia, South Africa, South Korea, and Turkey of 500 individuals.
- The samples in Argentina, Australia, Belgium, Canada, France, Germany, Great Britain, Hungary, Italy, Japan, the Netherlands, Poland, South Korea, Spain, Sweden, and the U.S. can be taken as representative of these countries' general adult population under the age of 75.
- The samples in Brazil, Chile, China (mainland), Colombia, India, Israel, Malaysia, Mexico, Peru, Russia, Saudi Arabia, South Africa, and Turkey are more urban, more educated, and/or more affluent than the general population. The survey results for these markets should be viewed as reflecting the views of the more "connected" segment of their population.
- The data is weighted so that each market's sample composition best reflects the demographic profile of the adult population according to the most recent census data.
- Where results do not sum to 100 or the 'difference' appears to be +/- 1 more/less than the actual, this may be due to rounding, multiple responses or the exclusion of don't knows or not stated responses.
- The precision of Ipsos online polls are calculated using a credibility interval with a poll of 1,000 accurate to +/- 3.5 percentage points and of 500 accurate to +/- 4.8 percentage points. For more information on the Ipsos use of credibility intervals, please visit the Ipsos website.
- The publication of these findings abides by local rules and regulations.
