

Most Americans Prefer Marvel to DC Movies

Ipsos Poll on Movie Universes

Washington, DC, August 15, 2017 — Nearly half of Americans (47%) prefer Marvel movies to DC Comics movies according to the latest Ipsos poll. Boasting franchises like the Avengers, including Iron Man, Thor and Captain America, Marvel easily overtook DC Comics. Despite the massive success of Wonder Woman and the Dark Knight movies, only one in ten Americans (11%) prefer DC Comics movies.

1. Which movie franchise do you like better?

	Total
Marvel	47%
DC Comics	11%
Neither	25%
Don't know	18%

About the Study

These are findings from an Ipsos poll conducted August 15-16, 2017. For the survey, a sample of roughly 1,005 adults age 18+ from the continental U.S., Alaska and Hawaii was interviewed online in English.

The sample for this study was randomly drawn from Ipsos's online panel (see link below for more info on "Access Panels and Recruitment"), partner online panel sources, and "river" sampling (see link below for more info on the Ipsos "Ampario Overview" sample method) and does not rely on a population frame in the traditional sense. Ipsos uses fixed sample targets, unique to each study, in drawing sample. After a sample has been obtained from the Ipsos panel, Ipsos calibrates respondent characteristics to be representative of the U.S. Population using standard procedures such as raking-ratio adjustments. The source of these population targets is U.S. Census 2013 American Community Survey data. The sample drawn for this study reflects fixed sample targets on demographics. Post-hoc weights were made to the population characteristics on gender, age, race/ethnicity, region, and education.

Statistical margins of error are not applicable to online polls. All sample surveys and polls may be subject to other sources of error, including, but not limited to coverage error and measurement error. Where figures do not sum to 100, this is due to the effects of rounding. The precision of Ipsos online polls is measured using a credibility interval. In this case, the poll has a credibility interval of plus or minus 3.5 percentage points for all respondents. Ipsos calculates a design effect (DEFF) for each study based on the variation of the weights, following the formula of Kish (1965). This study had a credibility interval adjusted for design effect of the following (n=1,005, DEFF=1.5, adjusted Confidence Interval=5).
