

# 57%

of Canadians are excited by the impact Artificial intelligence (AI) could have on health

## TECH AND AI TO THE RESCUE?

Tech and AI could help solve issues affecting our health system (e.g. access to care, dealing with chronic diseases)

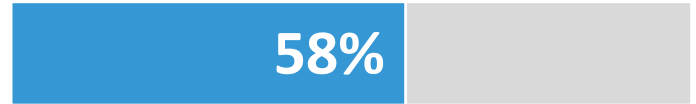

## INTEGRATING TECH INTO PERSONAL CARE

If I incorporate more technology into my personal health care I will...

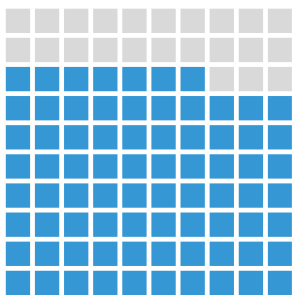

Be able to prevent illnesses

Get better care from my physician

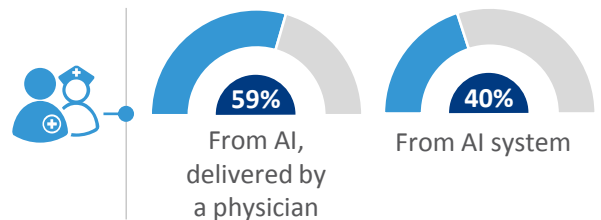

## THE ROLE OF PHYSICIANS IN A CHANGING LANDSCAPE

# 77%

Canadians support more investments in tech and AI, but not if it leads to fewer health professionals...

... and place higher trust for AI derived diagnosis/treatment if delivered by physician

## ABOUT THE STUDY

N=2,003 interviews were completed among a representative sample of Canadians aged 18 years and older (the "credibility interval" for a sample of this size is  $\pm 2.5$  percentage points, 95% of the time). The 10 minute survey was conducted online between May 16 and 18. The general public data was weighted according to region, age, and gender to ensure a sample that matches the actual adult population of Canada.
