In a typical year how many times would you say that you interact with the health system such as visit your family physician, go to a health clinic, go to a hospital, etc. to deal with a health concern (not visiting someone in care) for yourself or a family member?

How likely would you be to take advantage of a mobile device that would measure your health status on a continuous basis meaning 24 hours/7 days per week. It would measure all your key vitals, detect the presence of toxins in your environment and create a personal warning system for you when things are out of the normal range?
