I am going to read out a few facts to you, and after each one, please tell me if it makes you much more likely, somewhat more likely, somewhat less likely or much less likely to support increased investments in Canada's space technology? If it makes no difference to your opinion please say so. [Monitoring the Earth from space can signal early warning of natural disasters in Canada and help protect our oceans, forests, wetlands and farmlands from climate change]

I am going to read out a few facts to you, and after each one, please tell me if it makes you much more likely, somewhat more likely, somewhat less likely or much less likely to support increased investments in Canada's space technology? If it makes no difference to your opinion please say so. [Investments in Canada's space program lead to new medical discoveries, such as robot assisted surgery and new research on Osteoporosis that will help broken bones heal much faster and better]

I am going to read out a few facts to you, and after each one, please tell me if it makes you much more likely, somewhat more likely, somewhat less likely or much less likely to support increased investments in Canada's space technology? If it makes no difference to your opinion please say so. [If we stop investing in space technology we run the risk of losing our best and brightest students, engineers and researchers to other countries more active in space]

The United States, Europe, Japan and Russia are currently planning the next big space exploration project, a return to the Moon in the 2020s. The US will build a space station that orbits the Moon, as a base for lunar exploration and as a Gateway to explore deeper space. Canada is expected to participate and provide advanced AI and robotics, our traditional role.
