

COVID-19 VIRUS HOME TESTING

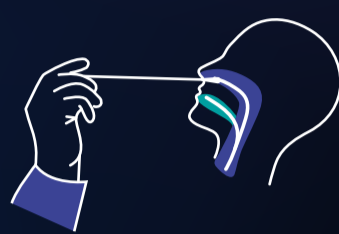

22nd August to 7th September

Understanding how many people have
COVID-19 virus at any one time

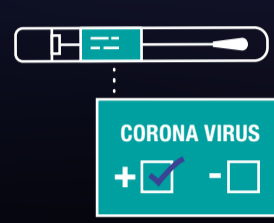

211,291

Test kits
sent to participants

152,909

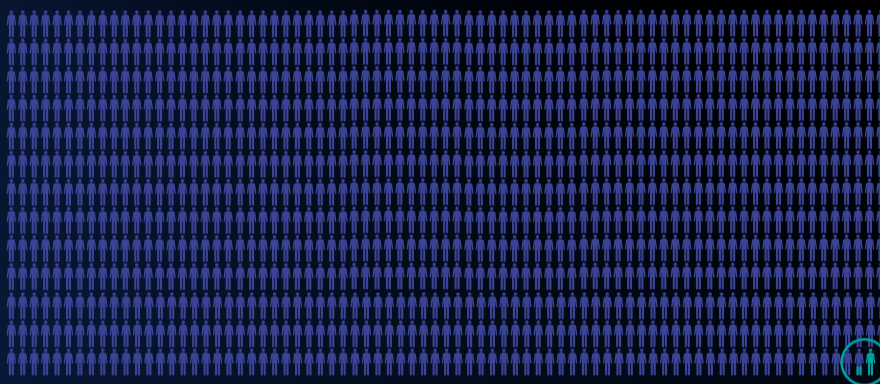

Swab results
(22/08/20 - 07/09/20)

136

Tested positive
for COVID-19

**13 people in
every 10,000
had the virus**

One figure is equal to 10 people

Positive tests by region of England, by 10,000 people

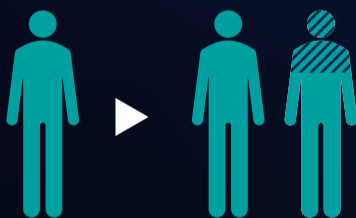

70,560

Estimated number of people infected with
COVID-19 on any one day in England

R= 1.7

Estimate of the reproduction number

Every person with the virus will, on average, spread it to 1.7 other people

R number
by time period

Number of people affected
by time period
