HEALTH FOUNDATION COVID-19 POLLING BAME TABLES

3 Sep 2020

Table 189
ABE34N - I would like to give you a little more information about how the app might work.
If you download the app, then when you are close to other people who also have the app, your phones exchange a key code.
If you have Coronavirus and report this on the app, your phone sends your anonymised ID to a central database and downloads a copy of the database.
Your phone would use this central database to send alerts to the phones of people you have been close to.
The alerts will not identify you or when the contact happened. Anonymised data linking you to other app users would stay on your phone.
How likely or unlikely would you be to download the app?
BASE: SPLIT SAMPLE: ALL THOSE ASKED Q34N

Table 190

ABE34N - I would like to give you a little more information about how the app might work.

If you download the app, then when you are close to other people who also have the app, your phones exchange a key code.

If you have Coronavirus and report this on the app, your phone sends your anonymised ID to a central database and downloads a copy of the database.

Your phone would use this central database to send alerts to the phones of people you have been close to.

The alerts will not identify you or when the contact happened. Anonymised data linking you to other app users would stay on your phone.

How likely or unlikely would you be to download the app?

Table 194
ABE35N - I would like to give you a little more information about how the app might work.
If you download the app, then when you are close to other people who also have the app, your phones exchange a key code.
If you have Coronavirus and report this on the app, your phone sends your anonymised ID and any key codes gathered from other phones to a central database.
This database would send alerts to the phones of people you have been close to. The alerts will not identify you or when the contact happened.
Anonymised data linking you to other app users would be recorded on the central database.
How likely or unlikely would you be to download the app?
