Recently, the government announced it would be presenting a new plan for Canada's COVID-19 recovery in September through a "Speech from the Throne." The Speech from the Thone outlines the broad priorities for the federal government in Ottawa. What should be the main priority in the Speech from the Throne?

Some people say that the economic recovery from COVID-19 means governments need to spend as much as necessary to get people and businesses back to work, even if this results in higher deficits. Other people say that spending should be retrained, given how much we have already spent on the COVID-19 recovery, to keep the deficit under control. Which is closer to your own point of view?

There has been some talk of what Canada's governments should prioritize in the COVID-19 recovery. Some people say that Canada should use the recovery to make significant investments aimed at creating a greener country. These people believe that we need to prioritize a "green recovery" even if it means the recovery takes a bit longer. Other people say that economic recovery should be our highest priority and that we should focus on getting our existing industries/businesses back on their feet and employing people as quickly as possible, without worrying about other things. These people believe that we need to prioritize the economy above all else, even if it means less focus on other things. Which is closer to your own point of view?

To fight climate change, the federal government has set a goal of achieving “net zero” emissions by 2050. Net zero means that some greenhouse gas emissions would still happen, but they would be cancelled out by reductions in other areas. Do you believe it is possible to achieve “net zero” by 2050?
