GAME CHANGERS

These are the latest findings from Ipsos' Perils of Perception survey. The survey was conducted in 30 markets and asked people about what individuals can do to tackle climate change.

For the purpose of this study, the main sources of 'actual' data for impacts of individual actions on climate change can be found at the end of the report.

Summary

Despite high concern and high confidence that we know what to do in our own lives to combat climate change, misperceptions are rife and many often just don't know.

Across markets, people on average underestimate the most impactful climate actions they can take, and overestimate the least impactful ones

Awareness of the climate change impacts we are already seeing is low. Few knew how warm recent years have been, or how many lives are already impacted by climate change

Climate action messaging can confuse: many think it's better to eat local meat rather than imported plants, when the reverse is true: vegetarianism is far more impactful

A Global Market Average of 7 in 10 agree:

“I understand what action I need to take to play my part in tackling climate change.”

But do we really?

Q.

To what extent do you agree or disagree with the following:

I understand what action I need to take to play my part in tackling climate change

In almost every market, a majority agree they understand what action they need to take to tackle climate change.

But do we really?

Base: 21,011 online adults aged 16-74 across 30 markets, 19 Feb – 5 Mar 2021

Behavioural perceptions

How do we reduce our climate change impact?

**Looking at well-know ‘green’ actions,
how does the public rank potential
greenhouse gas savings from each?**

Q.

From this list of options, which three do you think would most reduce the greenhouse gas emissions of an individual living in one of the world's richer countries?

Global Market Averages

While all actions can make a difference, the most impactful actions are ranked too low, and the least impactful actions ranked too high in the public's estimations of carbon savings.

Base: 21,011 online adults aged 16-74 across 30 markets, 19 Feb – 5 Mar 2021

*Source: Institute of Physics, 2017. The most effective individual steps to tackle climate change aren't being discussed. Available here: <https://phys.org/news/2017-07-effective-individual-tackle-climate-discussed.html>

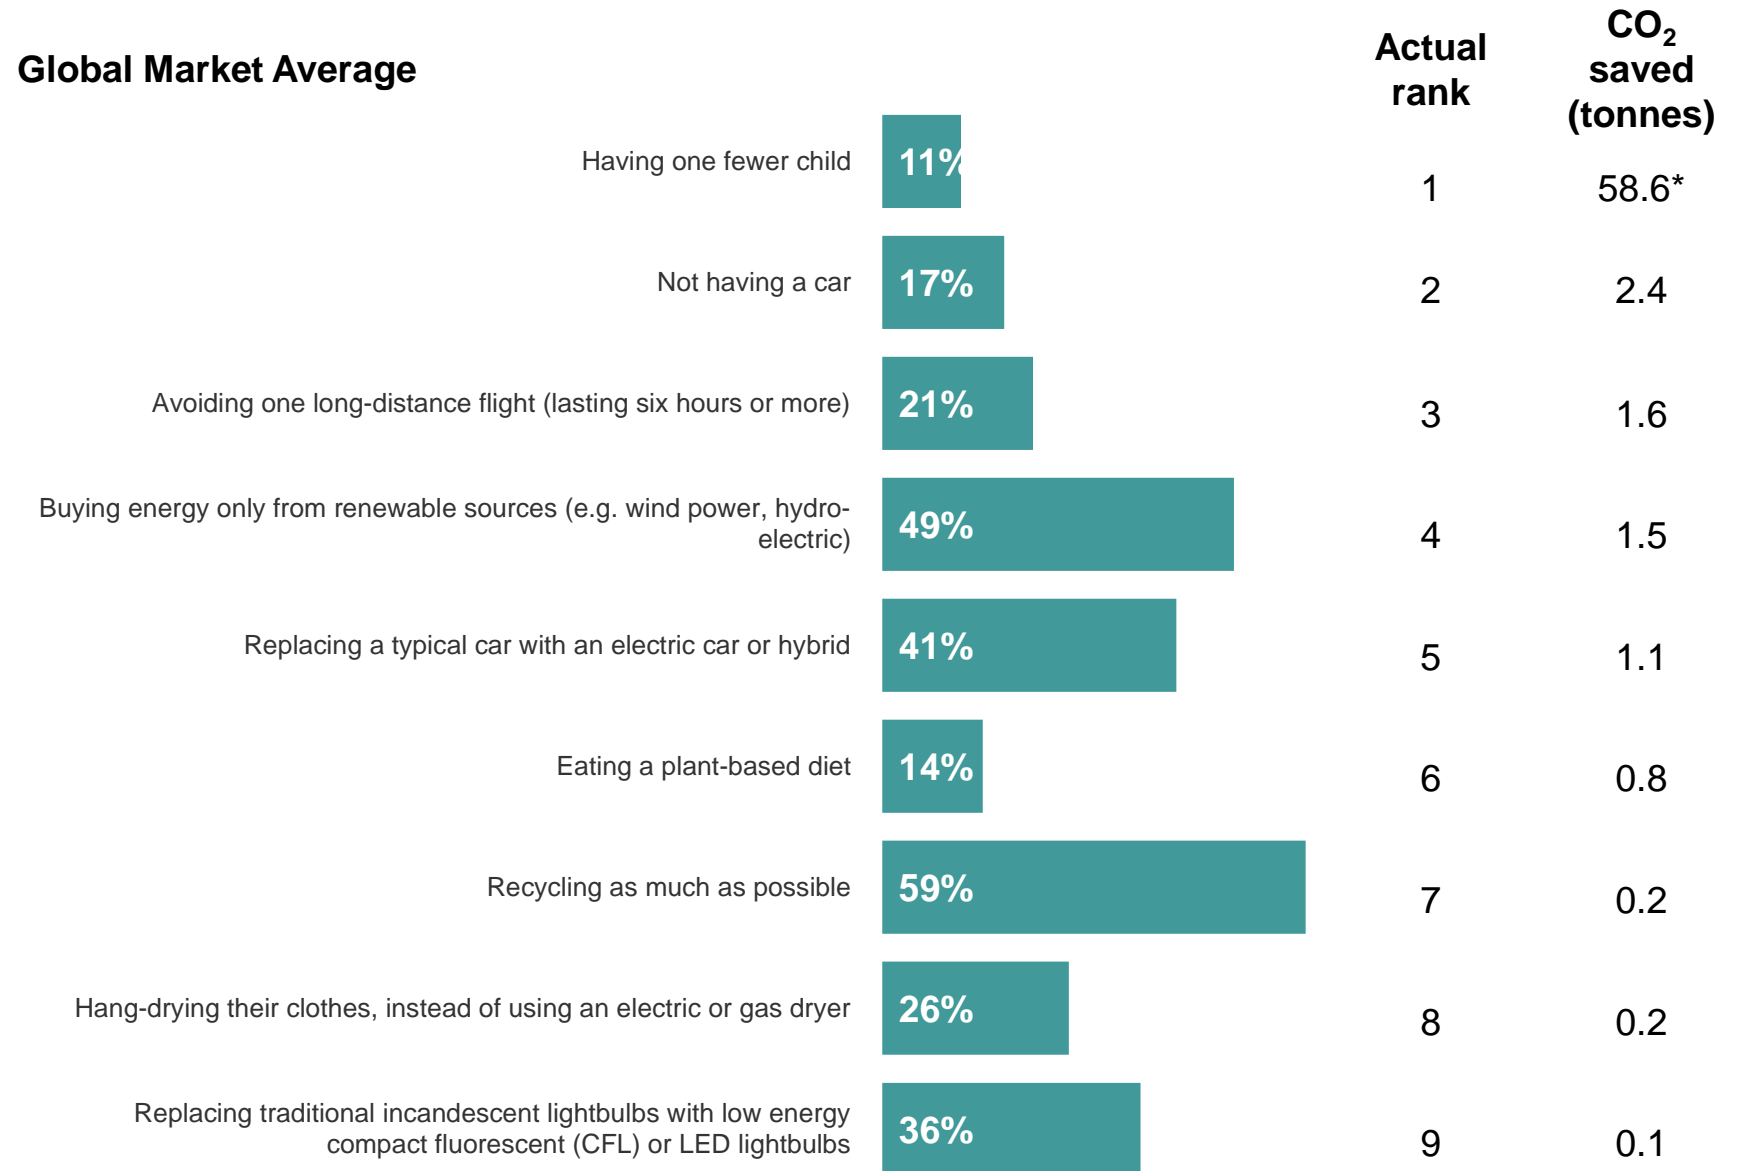

NB: Emissions saved from having one fewer child is calculated by quantifying future emissions of descendants based on historical rates, based on heredity

Q.

From this list of options, which three do you think would most reduce the greenhouse gas emissions of an individual living in one of the world's richer countries?

Global Market Averages

The difference is clear when ranked by actual order – actions like recycling, hang-drying and using low energy light bulbs are over-estimated compared with not having a car at all or avoiding long-distance flights

Base: 21,011 online adults aged 16-74 across 30 markets, 19 Feb – 5 Mar 2021

*Source: Institute of Physics, 2017. The most effective individual steps to tackle climate change aren't being discussed. Available here: <https://phys.org/news/2017-07-effective-individual-tackle-climate-discussed.html>

NB: Emissions saved from having one fewer child is calculated by quantifying future emissions of descendants based on historical rates, based on heredity

Market summary – three most effective actions for reducing an individual's greenhouse gas emissions

From this list of options, which three do you think would most reduce the greenhouse gas emissions of an individual living in one of the world's richer countries?

Top three actions:

- #1 action in market
- #2 action in market
- #3 action in market

Base: 21,011 online adults aged 16-74 across 30 markets, 19 Feb – 5 Mar 2021

© Ipsos | Perils of Perception 2021 | April 2021 | PUBLIC

Going beyond the (more) obvious, what other actions could we take, and do we understand what impact they would have?

Q.

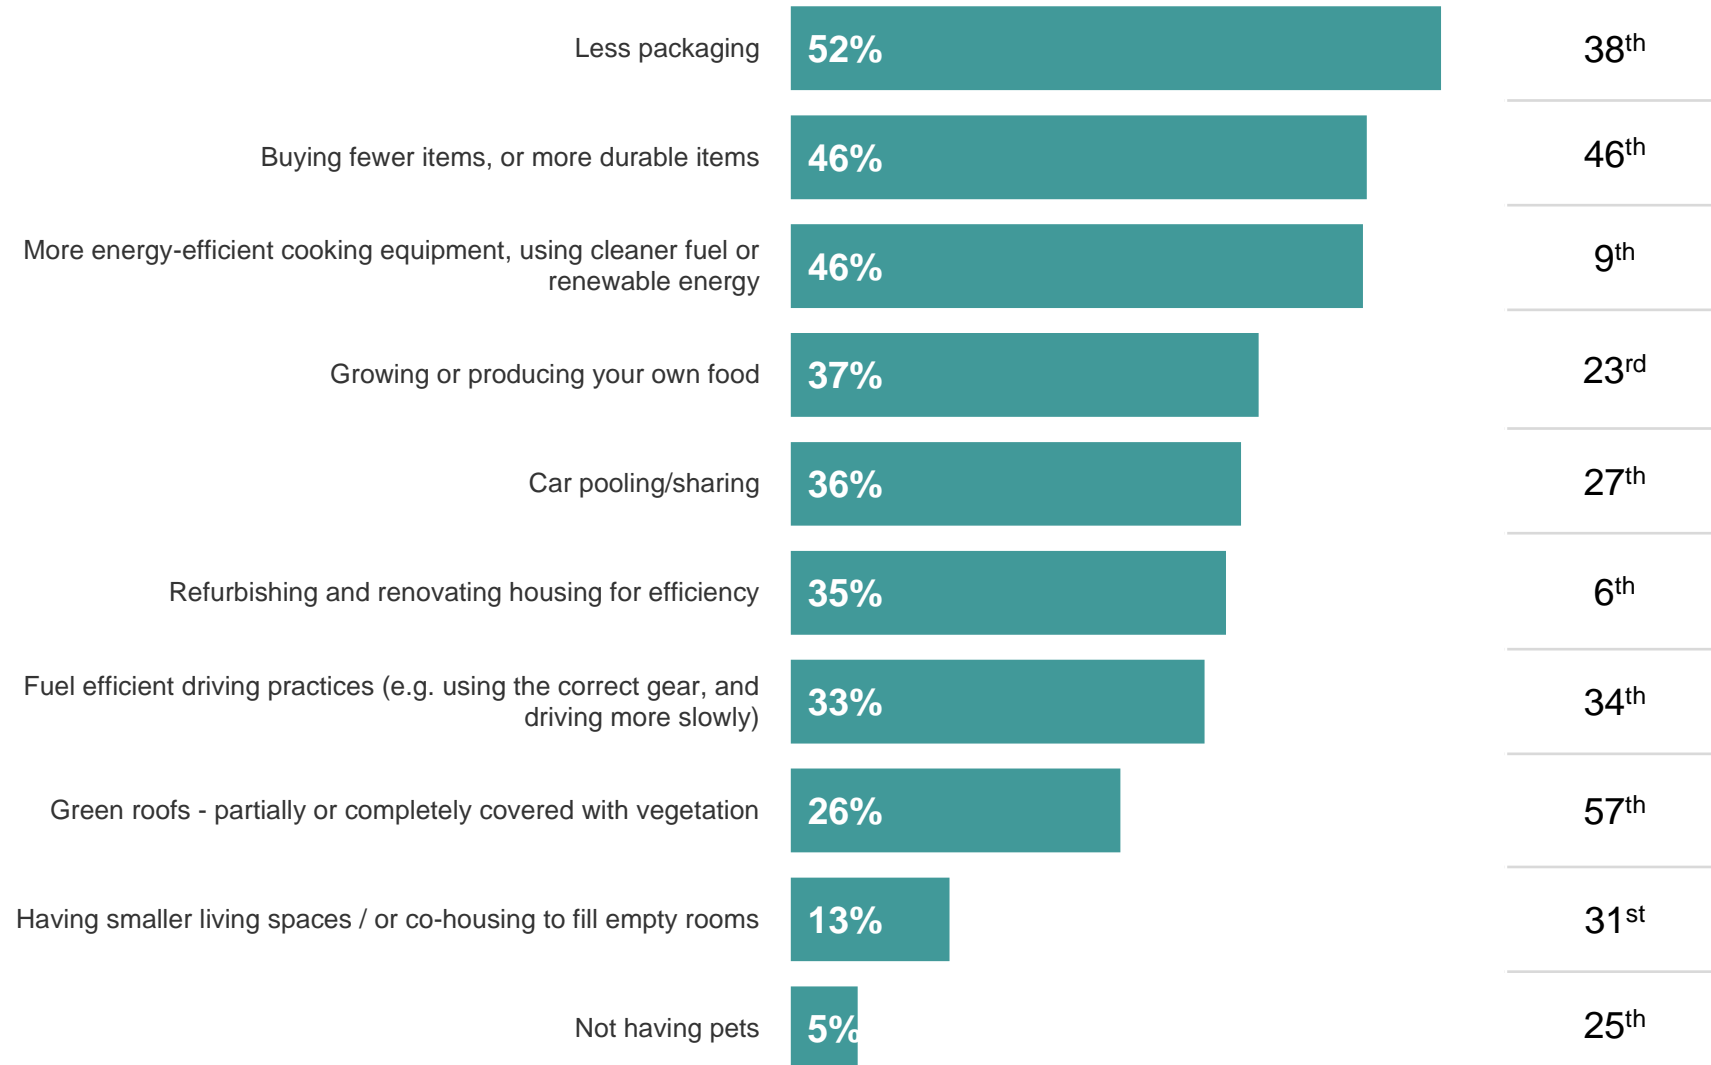

Which of the following actions do you think appear in the top 30 ways of reducing our personal climate change impact? Please select up to five.

Global Market Averages

Respondents were generally more accurate in selecting actions in the top ways to reduce our climate impact.

However, half believed less packaging (52%) and buying less (46%) were in the top thirty, more than, for example, renovating or refurbishing housing for efficiency (35%).

Global Market Average

Base: 21,011 online adults aged 16-74 across 30 markets, 19 Feb – 5 Mar 2021

Q.

Which of the following actions do you think appear in the top 30 ways of reducing our personal climate change impact? Please select up to five.

Global Market Averages

The difference is clearer when ranked by actual order – actions such as buying products with less packaging and buying fewer or more durable items are over-estimated compared with refurbishing homes for energy efficiency.

Global Market Average

Base: 21,011 online adults aged 16-74 across 30 markets, 19 Feb – 5 Mar 2021

Market summary – top three actions perceived to be in the top thirty ways to reduce climate change impact

Which of the following actions do you think appear in the top 30 ways of reducing our personal climate change impact?

Top three actions:

- #1 action in market
- #2 action in market
- #3 action in market

Base: 21,011 online adults aged 16-74 across 30 countries/markets, 19 Feb – 5 Mar 2021

Impacts of climate change

Climate change already displaces more people than conflict, but only a minority know this.

Q.

In 2020, do you think more people suffered internal displacement as a result of conflict (such as war, criminal and political violence) or as a result of climate and weather-related disasters (such as hurricanes, storms and flooding)?

Global Market Averages

Two in five (43%) believe conflict to be the greater cause of internal displacement, while a third (32%) chose climate and weather-related disasters.

The true cause (climate and weather) accounted for two thirds (67%) of new displacements in the first six months of 2020.

Global Market Average

- Internal displacement due to climate
- Internal displacement due to conflict
- Don't know

Base: 21,011 online adults aged 16-74 across 30 markets, 19 Feb – 5 Mar 2021

*Source: GRID, 2020. 2020 Mid-Year Update. Available here: <https://www.internal-displacement.org/sites/default/files/publications/documents/2020%20Mid-year%20update.pdf>

True causes of new displacements (million people), first half of 2020*

Q.

In 2020, do you think more people suffered internal displacement as a result of conflict (such as war, criminal and political violence) or as a result of climate and weather-related disasters (such as hurricanes, storms and flooding)?

In most markets, respondents perceived conflict as being the greater cause of internal displacement, although with some exceptions – such as the US, France, China and Japan

Feeling hot, hot, hot? Only one in twenty-five of the public know that all of the last six years were among the hottest on record.

Q.

The World Meteorological Organization collects annual global temperatures, to see whether they are rising or falling across the world. Records begin in 1850. Since 2015, how many years have been the warmest year on record?

Global Market Averages

Nearly all respondents either underestimated (22%) or were unsure (73%) of how many years since 2015 have been the warmest on record.

Only one in twenty-five (4%) correctly stated that the 6 years since 2015 have been the warmest on record.

Global Market Average

Average response among those giving an answer:

Since 2015, 4 years have been the warmest on record

Actual data:

Since 2015, **6 years** have been the warmest on record

Base: 21,011 online adults aged 16-74 across 30 markets, 19 Feb – 5 Mar 2021

*Source: The World Meteorological Organisation, 2021. 2020 was one of three warmest years on record. Available here: <https://public.wmo.int/en/media/press-release/2020-was-one-of-three-warmest-years-record>

Climate change and diet

Going plant-based makes more of a difference to your carbon footprint than eating local, but the public guess this is the other way around.

Q.

And which of these two actions do you think would most reduce an individual's greenhouse gas emissions?

Global Market Averages

Eating local does not necessarily mean eating greener, as switching to a vegetarian diet including some imported fruit and vegetables more effectively reduces an individual's greenhouse gas emissions. However, three in five (57%) perceived eating a locally produced diet that includes some animal foodstuffs as being the more environmentally friendly diet.

Global Market Average

Base: 21,011 online adults aged 16-74 across 30 markets, 19 Feb – 5 Mar 2021

*Source: Our World in Data, 2020. You want to reduce the carbon footprint of your food? Focus on what you eat, not whether your food is local. Available here: <https://ourworldindata.org/food-choice-vs-eating-local>

Q.

And which of these two actions do you think would most reduce an individual's greenhouse gas emissions:

Eating a diet that is mostly locally produced, including locally produced meat and dairy products?

Eating a vegetarian diet, even if some of the fruit and vegetables have been imported from other countries?

In most markets, respondents perceived a locally produced diet to have lower emissions than a vegetarian one with some imported produce. India was the exception, with respondents more evenly split.

Base: 21,011 online adults aged 16-74 across 30 markets, 19 Feb – 5 Mar 2021

The true meaning of food miles? Public understanding of relative impact of meat and miles is low. We have little idea of how burgers compare to carbon emissions from driving.

Q.

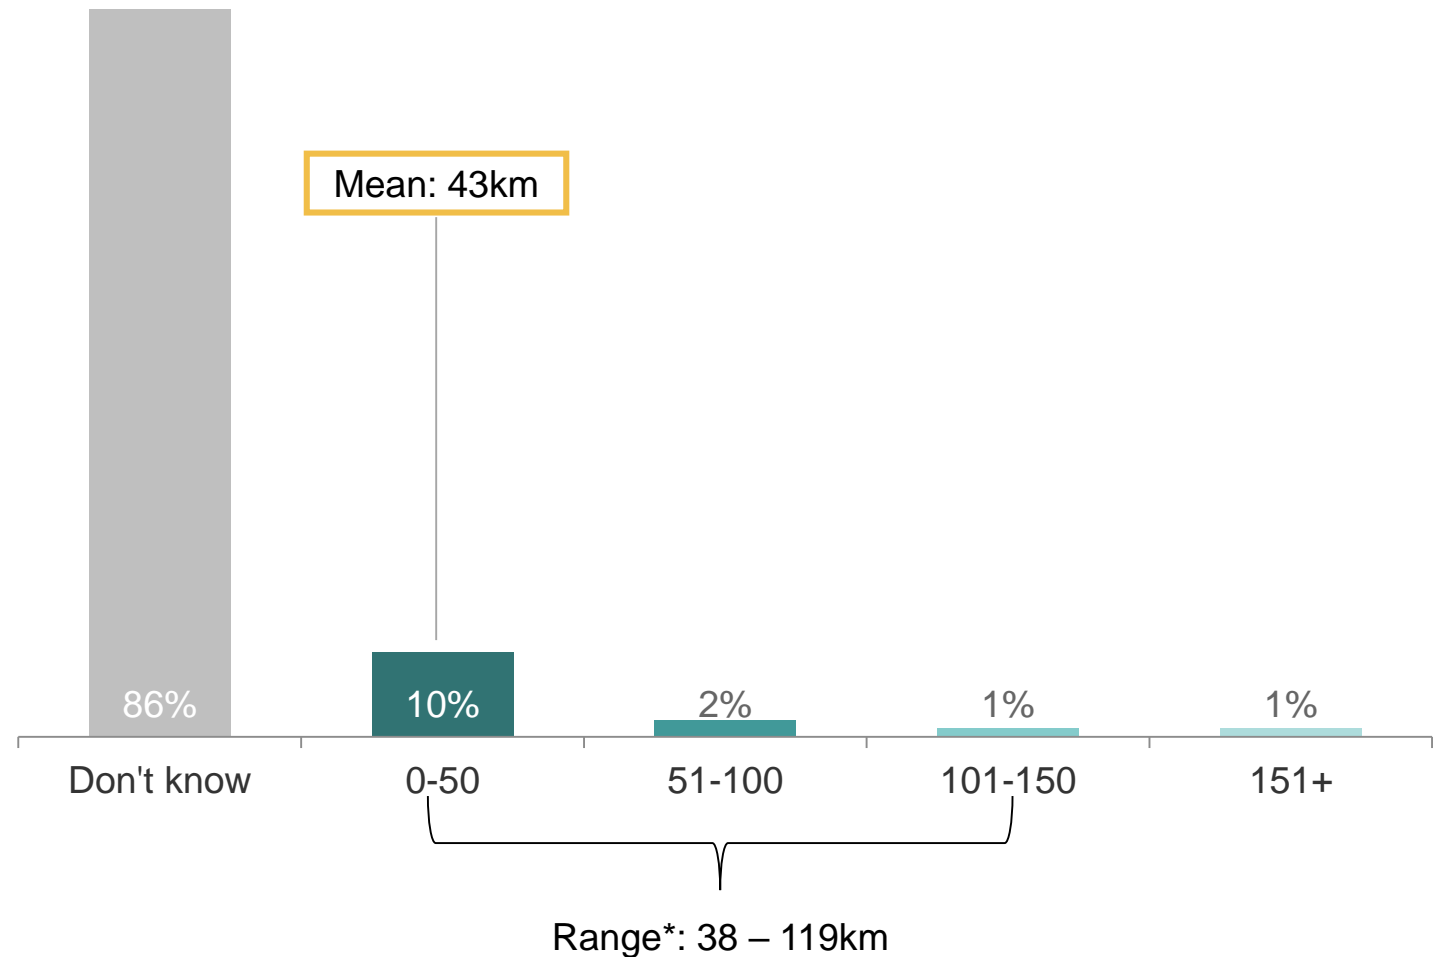

The amount of carbon dioxide released into the atmosphere as a result of making one beef burger is equivalent to driving how far in a car?

Global Market Averages – mean in km

The majority of respondents (86%) could not say how many km of driving a beef burger was equivalent to. Of those who answered, one in ten (10%) believed this to be 50km or less.

The true journey range is between 38 and 119km, depending on car efficiency. The average answer (43km) came at the lower end of this range.

Global Market Average

Base: 21,011 online adults aged 16-74 across 30 markets, 19 Feb – 5 Mar 2021

*Source: Our World in Data, 2020. You want to reduce the carbon footprint of your food? Focus on what you eat, not whether your food is local. Available here: <https://ourworldindata.org/food-choice-vs-eating-local> ; IEA 2021. Tracking Transport 2020. Available here: <https://www.iea.org/reports/tracking-transport-2020/rail#abstract> . Quarter pounder burger patty weight of 113.4g is assumed.

These are the findings of the *Global Advisor* wave 152 (GA 152) an Ipsos survey conducted between February 19 and March 5, 2021.

The survey instrument is conducted monthly in 30 markets around the world via the Ipsos Online Panel system.

The markets reporting herein are Argentina, Australia, Belgium, Brazil, Canada, China, Chile, Colombia, France, Great Britain, Germany, Hungary, Hong Kong, India, Italy, Japan, Malaysia, Mexico, the Netherlands, Peru, Poland, Russia, Saudi Arabia, South Africa, South Korea, Spain, Sweden, Switzerland, Turkey and the United States of America.

For the results of the survey presented herein, an international sample of 21,011 adults aged 18-74 in the US, Canada, Hong Kong, Malaysia, South Africa, and Turkey, and age 16-74 in all other markets, were interviewed. Approximately 1000+ individuals participated on a market by market basis via the Ipsos Online Panel with the exception of Argentina, Chile,

Colombia, Hong Kong, Hungary, India, Malaysia, Mexico, the Netherlands, Peru, Poland, Russia, Saudi Arabia, South Africa, South Korea, Sweden, Switzerland and Turkey, where each have a sample approximately 500+. The precision of Ipsos online polls are calculated using a credibility interval with a poll of 1,000 accurate to +/- 3.5 percentage points and of 500 accurate to +/- 5.0 percentage points. For more information on the Ipsos use of credibility intervals, please visit the Ipsos website.

17 of the 30 markets surveyed online generate nationally representative samples in their countries (Argentina, Australia, Belgium, Canada, France, Germany, Great Britain, Hungary, Italy, Japan, the Netherlands, Poland, South Korea, Spain, Sweden, Switzerland and United States).

The samples in Brazil, Chile, mainland China, Colombia, Hong Kong, India, Malaysia, Mexico, Peru, Russia, Saudi Arabia, South Africa and Turkey are more urban & educated, and/or more affluent than the general population. We refer to these respondents as “Upper Deck Consumer Citizens”. They are not nationally representative of their market.

Summary of sources for actual data

A range of data sources were used to derive the 'true' values referenced in this deck. Details of each source and any assumptions made are included on the relevant slides. The full list of sources is included below:

GAME CHANGERS

In our world of rapid change, the need for reliable information to make confident decisions has never been greater.

At Ipsos we believe our clients need more than a data supplier, they need a partner who can produce accurate and relevant information and turn it into actionable truth.

This is why our passionately curious experts not only provide the most precise measurement, but shape it to provide True Understanding of Society, Markets and People.

To do this we use the best of science, technology and know-how and apply the principles of security, simplicity, speed and substance to everything we do.

So that our clients can act faster, smarter and bolder.
Ultimately, success comes down to a simple truth:
You act better when you are sure.
