

Press Release

IPSOS SOUTH AFRICA, JOHANNESBURG: 22 APRIL 2021

What is the plan to tackle climate change?

Only 31% of online citizens agree that their country's government has a clear plan in place for how government, businesses and people themselves are going to work together to tackle climate change

A new global study by Ipsos, conducted online among adults across 30 countries between 19 February and 5 March, 2021 shows that a Global Market Average of only 31% agree their country's government has a clear plan in place for how government, businesses and people themselves are going to work together to tackle climate change. A third, 34%, disagree.

2021 is a 'Super Year' for international environmental policy, with major deals in process on climate, biodiversity, food and oceans. Yet despite their high interest and concern about the environment, low public awareness of the plans suggests they could be more effectively included and engaged to be part of the solution.

All nations included in our study have signed the Paris Agreement and almost all have submitted and published initial Nationally Determined Contributions (NDCs) – or plans to tackle climate change. These are due to be updated in 2021 and pushing for these plans to be more ambitious will be a major focus of [COP26 in Glasgow](#) in November this year.

At the same time, people feel the burden of responsibility, with 72% agreeing that if ordinary people do not act now to combat climate change, they will be failing future generations. 68% globally say that if companies do not act to combat climate change, then they are failing their employees and customers, and 65% globally believe that if their government does not combat climate change then it is failing citizens.

Among the top findings are:

A Global Market Average of only 31% believe their own country has a clear plan in place for how government, businesses and people themselves are going to work together to tackle climate change. Belief that government has a clear plan in place is highest in Saudi Arabia (64%), China (61%) and India (58%) and lowest in the United States (18%) and Japan (16%). Note that polling took place after Joe Biden returned the US to the Paris climate accord on 20th January 2020. In South Africa only 22% of online citizens agree that there is a clear plan.

SUMMARY: GLOBAL MARKET AVERAGES ON PLANS AND RESPONSIBILITY

Q To what extent do you agree or disagree with the following statements:

© Ipsos 2021
What is the plan to tackle climate change? (22 April 2021). Results from an Ipsos online study, conducted: 19 February – 5 March 2021
Base: 21,011 online adults aged 16-74 across 30 countries

Countries which have made legally binding commitments to achieve net zero greenhouse gas emissions by a specific date do not have higher levels of public agreement that their government has a clear plan. The Global Market Average agreement is 31% but it is no better in Great Britain (28%), France (24%) and Hungary (24%) when all these markets have committed to reaching net zero by 2050. In Sweden, where there is a legally binding agreement to reach net zero by 2045, only 23% of the public agree their government has a clear plan.

LEGALLY BINDING NET ZERO COMMITMENTS DO NOT CORRELATE WITH HIGHER AWARENESS OF A GOVERNMENT'S PLANS

Q To what extent do you agree or disagree with the following: [MARKET]'s government has a clear plan in place for how government, businesses and people themselves are going to work together to tackle climate change

In a year of urgently competing priorities, Global Market Average agreement that if their country's government does not act now, it will be failing its citizens has fallen just 3 percentage points to 65%, from when it was asked in 2020 (68% agreed), just before the [WHO](https://www.who.int/emergencies/diseases/novel-coronavirus-2019) declared Coronavirus a pandemic, on 12 March 2020. Agreement from online citizens is highest in Chile (84%), South Africa (83%) and Colombia (82%), and lowest in Russia (42%) and Saudi Arabia (38%).

THERE IS STRONG AGREEMENT THAT GOVERNMENTS WILL BE FAILING CITIZENS IF THEY DON'T ACT NOW ON CLIMATE CHANGE

Q To what extent do you agree or disagree with the following: If [MARKET]'s government does not act now to combat climate change, it will be failing the people of [MARKET]

Opinions are, however, divided on whether tackling climate change should or should not be a priority in the economic recovery from Covid-19. A Global Market Average of 36% agree climate change should not be a priority in the economic recovery, while 35% disagree. Agreement that climate change should not be a priority is highest in India (52%), and lowest in Colombia (28%)

THE PUBLIC ARE DIVIDED ON PRIORITISATION OF CLIMATE CHANGE IN THE COVID-19 RECOVERY

Q To what extent do you agree or disagree with the following: Tackling climate change should not be a priority for [MARKET]'s government in the economic recovery from Covid-19

Covid-19 and actions to control its spread have restricted the public's ability or willingness to behave in several ways which have a relatively high environmental impact, such as air travel, car travel, and shopping for fun rather than from necessity. Some ask if, once restrictions are removed, these behaviours will revert to less sustainable lifestyles than before the pandemic. But this study suggests that in the main, the public do not expect this to happen.

There is evidence that behaviours have changed due to the pandemic, and that some, if not all of these changes are likely to endure once all restrictions are removed. For example, 39% expect to be doing more to avoid food waste once restrictions are removed, than they were before the pandemic. In South Africa, 59% of online citizens will strive to avoid wasting food.

Around the world, about a third expect to travel more on foot or by bike, rather than by car (34%) and a similar proportion expect they will more often buy only what they really need instead of shopping for fun (also 34%). In South Africa almost half (47%) of online citizens resolve to buy only what they need in future.

Three in ten (31%) say they will be working from home rather than commuting more than they were before the pandemic and in South Africa an even higher proportion (44%) intend to work more from home in future.

OVERALL, THE PUBLIC DOES NOT EXPECT TO REVERT TO LESS SUSTAINABLE BEHAVIOURS WHEN RESTRICTIONS ARE REMOVED

Q How do you expect your personal behaviours to change once any restrictions on your life because of Coronavirus are removed? Do you expect to do the following things more, less, or the same amount as you did before the Coronavirus pandemic?

© Ipsos 2021
What is the plan to tackle climate change? (22 April 2021). Results from an Ipsos online study, conducted: 19 February – 5 March 2021
Base: 21,011 online adults aged 16-74 across 30 countries

A Global Market Average of 69% agree that “I understand what action I need to take to play my part in tackling climate change.” Yet [Ipsos Perils of Perception](#) research shows that this isn’t always the case. We underestimate high-impact actions such as becoming vegetarian and taking flights, and overestimate lower-impact actions such as avoiding excess packaging. While all these actions can make a difference, understanding their relative impact is also vital.

Technical detail

- These are the results of a 30-market survey conducted by Ipsos on its Global Advisor online platform. Ipsos interviewed a total of 21,011 adults aged 18-74 in the United States, Canada, Hong Kong, Israel,

Press Release - Continued

Malaysia, South Africa, and Turkey, and 16-74 in 24 other markets between Friday, February 19 and Friday, March 5, 2021.

- The sample consists of approximately 1,000 individuals in each of Australia, Belgium, Brazil, Canada, mainland China, France, Germany, Great Britain, Italy, Japan, Spain, and the U.S., and 500 individuals in each of Argentina, Chile, Colombia, Hong Kong, Hungary, India, Malaysia, Mexico, the Netherlands, Peru, Poland, Russia, Saudi Arabia, South Africa, South Korea, Sweden, Switzerland and Turkey.
- The samples in Argentina, Australia, Belgium, Canada, France, Germany, Great Britain, Hungary, Italy, Japan, the Netherlands, Poland, South Korea, Spain, Sweden, Switzerland, and the U.S. can be taken as representative of their general adult population under the age of 75.
- The samples in Brazil, Chile, mainland China, Colombia, Hong Kong, India, Malaysia, Mexico, Peru, Russia, Saudi Arabia, South Africa, and Turkey are more urban, more educated, and/or more affluent than the general population. The survey results for these markets should be viewed as reflecting the views of the more “connected” segment of their population.
- The data is weighted so that each market’s sample composition best reflects the demographic profile of the adult population according to the most recent census data.
- “The Global Market Average” reflects the average result for all the markets and markets where the survey was conducted. It has not been adjusted to the population size of each market or market and is not intended to suggest a total result.
- Where results do not sum to 100 or the ‘difference’ appears to be +/-1 more/less than the actual, this may be due to rounding, multiple responses, or the exclusion of “don’t know” or not stated responses.
- The precision of Ipsos online polls is calculated using a credibility interval with a poll of 1,000 accurate to +/- 3.5 percentage points and of 500 accurate to +/- 5.0 percentage points. For more information on Ipsos’ use of credibility intervals, please visit the Ipsos website.
- The publication of these findings abides by local rules and regulations.
