2. There has been much discussion about an energy transition in Canada and globally, meaning a shift away from fossil-based energy (e.g. oil and natural gas) to renewable energy sources (e.g. wind, hydro, solar and geothermal). Currently, about 19% of Canada's energy comes from renewable sources. How long do you think it will take for renewable energy sources to provide the majority (50%+) of Canada's energy?
