

TOPLINE & METHODOLOGY

NAMI/Ipsos – 988 Crisis Response Research

Conducted by Ipsos using KnowledgePanel®
A survey of the American general population (ages 18+)

Interview dates: Oct. 22-25, 2021

Number of interviews: 2,049

Margin of error: +/-2.3 percentage points at the 95% confidence level

NOTE: All results show percentages among all respondents, unless otherwise labeled. Reduced bases are unweighted values.

NOTE: * = less than 0.5%, - = no respondents

Annotated Questionnaire:

1. Which three of the following issues do you find most worrying? Select up to three.

	Total
COVID-19/coronavirus	30%
Crime or gun violence	28%
Climate change	26%

About the Study

This Ipsos poll was conducted October 22-25, 2021, on behalf of the National Alliance on Mental Health (NAMI), using the KnowledgePanel®. This poll is based on a representative sample of 2,049 U.S. residents, age 18 or older.

The study was conducted in English. The data were weighted to adjust for gender by age, race/ethnicity, education, Census region, metropolitan status, household income and race/ethnicity. The demographic benchmarks came from the 2019 American Community Survey (ACS) except for the metropolitan status, which is not available from the 1-year ACS data, were obtained from the 2020 March Supplement of the Current Population Survey (CPS).

- Gender (Male, Female) by Age (18–29, 30–44, 45–59, and 60+)
- Race/Hispanic Ethnicity (White Non-Hispanic, Black Non-Hispanic, Other or 2+ Races Non-Hispanic, Hispanic)
- Education (Less than High School, High School, Some College, Bachelor or higher)
- Census Region (Northeast, Midwest, South, West) by Metropolitan status (Metro, non-Metro)
- Household Income (Under \$25,000, \$25,000-\$49,999, \$50,000-\$74,999, \$75,000-\$99,999, \$100,000-\$149,999, \$150,000+)

The margin of sampling error is plus or minus 2.3 percentage points at the 95% confidence level, for results based on the entire sample of adults. The margin of error takes into account the design effect, which was 1.16 for all adults. In our reporting of the findings, percentage points are rounded off to the nearest whole number. As a result, percentages in a given table column may total slightly higher or lower than 100%. In questions that permit multiple responses, columns may total substantially more than 100%, depending on the number of different responses offered by each respondent.
