

PUBLIC POLL FINDINGS AND METHODOLOGY

Reuters/Ipsos Poll: Russia/Ukraine Crisis

Topline Findings

Washington, DC, April 26, 2022 – The latest wave of our Reuters/Ipsos poll tracking the Russia/Ukraine crisis, finds American’s impressions of how President Joe Biden is handling the conflict largely unchanged from a month ago. Thirty-seven percent of Americans approve of how Biden is handling Russia (compared to 38% last month), and 46% approve of how he is handling Ukraine (compared to 47% last month).

Four in five (81%) Americans believe the United States should not buy oil or gas from Russia during this conflict, even if it causes American gas prices to increase, an increase of four points compared to last month (77%). Seventy-three percent of Americans also believe the United States should provide weapons to the Ukraine, an increase of five points from last month (68%). Three-quarters (76%) of Americans are more likely to support a candidate who continues to support Ukraine with military aid and 78% are more likely to support a candidate who continues to support Ukrainian refugees.

Half (52%) of Americans are worried about Russia influencing the 2022 American congressional elections through misinformation and propaganda online. The same proportion (52%) are worried about Russia funneling money indirectly to American political candidates and campaigns. Finally, 82% of Americans are unlikely to support a candidate who supports Russia by advocating lifting sanctions.

These are the findings of an Ipsos poll conducted between April 25-26, 2022. For this survey, a sample of 1,005 adults age 18+ from the continental U.S., Alaska, and Hawaii was interviewed online in English. The poll has a credibility interval of plus or minus 3.8 percentage points for all respondents.

The results of this poll are trended against previous Reuters/Ipsos surveys conducted March 28-29, March 7-8, March 3-4, February 28-March 1, and February 23-24, 2022. For those surveys, a sample of ~1,000 adults age 18+ from the continental U.S., Alaska, and Hawaii was interviewed online in English. The polls have a credibility interval of plus or minus 3.8 percentage points for all respondents.

For complete results, please refer to the following annotated questionnaire:

PUBLIC POLL FINDINGS AND METHODOLOGY

About the Study

These are some of the findings of an Ipsos poll conducted between April 25-26, 2022 on behalf of Thomson Reuters. For this survey, a sample of 1,005 adults age 18+ from the continental U.S., Alaska, and Hawaii was interviewed online in English.

The sample was randomly drawn from [Ipsos' online panel](#), partner online panel sources, and ["river" sampling](#) and does not rely on a population frame in the traditional sense. Ipsos uses fixed sample targets, unique to each study, in drawing a sample. After a sample has been obtained from the Ipsos panel, Ipsos calibrates respondent characteristics to be representative of the U.S. Population using standard procedures such as raking-ratio adjustments. The source of these population targets is U.S. Census 2019 American Community Survey data. The sample drawn for this study reflects fixed sample targets on demographics. Posthoc weights were made to the population characteristics on gender, age, race/ethnicity, region, and education.

Statistical margins of error are not applicable to online non-probability polls. All sample surveys and polls may be subject to other sources of error, including but not limited to coverage error and measurement error. Where figures do not sum to 100, this is due to the effects of rounding. The precision of Ipsos online polls is measured using a credibility interval. In this case, the poll has a credibility interval of plus or minus 3.8 percentage points for all respondents. Ipsos calculates a design effect (DEFF) for each study based on the variation of the weights, following the formula of Kish (1965). This study had a credibility interval adjusted for design effect of the following (n=1,005, DEFF=1.5, adjusted Confidence Interval=+/- 5.3 percentage points).

Previous waves of this research are detailed below:

	CI	Total Sample
March 28-29	+/- 3.8	1,005
March 7-8	+/- 3.8	1,005
March 3-4	+/- 4.2	831
Feb 28-Mar 1	+/- 3.8	1,005
February 23-24	+/- 3.8	1,004
