About the Study

The Axios/Ipsos with Telemundo U.S. Latino Survey Q2, 2022 was conducted June 9th – June 18th, 2022 by Ipsos using our KnowledgePanel®. This poll is based on a nationally representative probability sample of 1,018 Latino/Hispanic adults age 18 or older in the United States.

The survey was conducted using KnowledgePanel, the largest and most well-established online probability-based panel that is representative of the adult US population. Our recruitment process employs an addressed-based sampling methodology using the latest Delivery Sequence File of the USPS – a database with full coverage of all delivery points in the US. Households invited to join the panel are randomly selected from all available households in the U.S. Persons in the sampled households are invited to join and participate in the panel. Those selected who do not already have internet access are provided a tablet and internet connection at no cost to the panel member. Those who join the panel and who are selected to participate in a survey are sent a unique password-protected log-in used to complete surveys online. As a result of our recruitment and sampling methodologies, samples from KnowledgePanel cover all households regardless of their phone or internet status and findings can be reported with a margin of sampling error and projected to the general population.

The study was conducted in both English and Spanish. The data were weighted to adjust for gender by age, education, language proficiency, Latino/Hispanic origin, household income, Census region, metropolitan status, and 2020 vote choice. Demographic benchmarks, among Latino/Hispanic adults age 18+, came from the 2021 Current Population Survey (CPS) with language proficiency from the 2019 American Community Survey (ACS). Benchmarks for 2020 Vote choice among the US Latino/Hispanic population came from Census pot-election survey and Pew 2021 validate voter survey. The weighting variables and categories were as follows:

- Gender (Male, Female) by Age (18–29, 30–44, 45–59, and 60+)
- Education (Less than High School grad, High School grad, Some College/Tech/Associate's degree, Bachelor's degree or higher)
- Language Proficiency (English proficient, Bilingual, Spanish proficient)
- Latino/Hispanic origin (Mexican, Puerto Rican, Cuban, Central American, Other)
- Household Income (Under \$50,000, \$50,000-\$99,999, \$100,000+)
- Census Region (Northeast, Midwest, South, West)
- Metropolitan status (Metro, non-Metro)
- 2020 Vote choice (Trump, Biden, Other/Did not vote)

The margin of sampling error is plus or minus 3.8 percentage points at the 95% confidence level, for results based on the entire sample of Latino/Hispanic adults. The margin of sampling error takes into account the design effect, which was 1.52. The margin of sampling error is higher and varies for results based on sub-samples. In our reporting of the findings, percentage points are rounded off to the nearest whole number. As a result, percentages in a given table column may total slightly higher or lower than 100%. In questions that permit multiple responses, columns may total substantially more than 100%, depending on the number of different responses offered by each respondent.
