The Washington Post

This Washington Post-Ipsos poll was conducted online April 28 to May 12, 2023 among a random national sample of 1,225 non-Hispanic Black adults age 18 and older and a partially overlapping sample of 1,018 U.S. adults overall. The sample was drawn through the Ipsos KnowledgePanel, an ongoing survey panel recruited through random sampling of U.S. households. Results among Black Americans have a margin of sampling error of plus or minus 3.5 percentage points and three points among Americans overall. Sampling, field work and data processing were conducted by Ipsos of Washington, D.C.

METHODOLOGICAL DETAILS

This poll was jointly sponsored and funded by The Washington Post and Ipsos. The poll includes a random sample of 1,225 non-Hispanic black in the United States, as well as a partially overlapping sample of 1,018 U.S. adults overall. Interviews were conducted in English and Spanish.

The questionnaire was administered with the exact questions in the exact order as they appear in this document. Demographic questions are not shown. If a question was asked of a reduced base of the sample, a parenthetical preceding the question identifies the group asked. Phrases surrounded by parentheticals within questions indicate clauses that were randomly rotated for respondents.

Ipsos conducted sampling, interviewing and tabulation for the survey using the KnowledgePanel, a representative panel of adults age 18 and over living in the United States. KnowledgePanel members are recruited through probability sampling methods using address-based sampling. Panel members who do not have internet access are provided with a tablet and internet service.

This survey uses statistical weighting procedures to account for deviations in the survey sample from known population characteristics, which helps correct for differential survey participation and random variation in samples. The overall sample and the non-Hispanic black sample were weighted separately to match the makeup of the respective population demographics by sex, region, metropolitan status, age, education and household income according to the Census Bureau's 2021 American Community Survey. The overall sample included an additional adjustment for race/ethnicity. Benchmarks for metropolitan status were from the Census Bureau's March 2022 Current Population Survey.

The margin of sampling error for the sample of non-Hispanic blacks is plus or minus 3.5 percentage points, the overall sample is plus or minus three percentage points. For results based on other subgroups, the margin of sampling error may be higher. Note that sampling error is only one of many potential sources of error in this or any other public opinion poll.
