GAME CHANGERS Ipsos

TOPLINE AND METHODOLOGY

About the Study

This Axios-Ipsos American Health Index survey was conducted May 31 to June 3, 2024 by Ipsos using our KnowledgePanel®. This poll is based on a nationally representative probability sample of 1,042 adults ages 18+.

No respondents were removed from the final data for refusing all of the survey items.

The survey was conducted using KnowledgePanel, the largest and most well-established online probability-based panel that is representative of the adult US population. Our recruitment process employs a scientifically developed addressed-based sampling methodology using the latest Delivery Sequence File of the USPS – a database with full coverage of all delivery points in the US. Households invited to join the panel are randomly selected from all available households in the U.S. Persons in the sampled households are invited to join and participate in the panel. Those selected who do not already have internet access are provided a tablet and internet connection at no cost to the panel member. Those who join the panel and who are selected to participate in a survey are sent a unique password-protected log-in used to complete surveys online. As a result of our recruitment and sampling methodologies, samples from KnowledgePanel cover all households regardless of their phone or internet status and findings can be reported with a margin of sampling error and projected to the general population. KnowledgePanel members receive a per survey incentive, usually the equivalent of $1 (though for some it is $2) in points, that can be redeemed for cash or prizes. No prenotification email for this study was sent prior to field. Panelists receive a unique login to the survey and are only able to complete it one time. One reminder email was sent for this study.

The margin of sampling error is plus or minus 3.2 percentage points at the 95% confidence level, for results based on the entire sample of adults. The margin of sampling error takes into account the design effect, which was 1.10. The margin of sampling error is higher and varies for results based on sub-samples. Sampling error is only one potential source of error. There may be other unmeasured non-sampling error in this or any poll. In our reporting of the findings, percentage points are rounded off to the nearest whole number. As a result, percentages in a given table column may total slightly higher or lower than 100%. In questions that permit multiple responses, columns may total substantially more than 100%, depending on the number of different responses offered by each respondent.

The study was conducted in both English and Spanish. The data were weighted to adjust for gender by age, race/ethnicity, education, Census region, metropolitan status, household income, and party identification. The demographic benchmarks came from 2023 Current Population Survey (CPS) from the US Census Bureau. Party ID benchmarks are from the most recent ABC News/Ipsos poll. The weighting categories were as follows:

- Gender (Male, Female) by Age (18–29, 30–44, 45–59, and 60+)
- Race/Hispanic Ethnicity (White Non-Hispanic, Black Non-Hispanic, Other or 2+ Races Non-Hispanic, Hispanic)
- Education (High School graduate or less, Some College, Bachelor, Masters and beyond)

TOPLINE AND METHODOLOGY

- Census Region (Northeast, Midwest, South, West)
- Metropolitan status (Metro, non-Metro)
- Household Income (Under $25,000, $25,000-$49,999, $50,000-$74,999, $75,000-$99,999, $100,000-$149,999, $150,000+)
- Party ID (Republican/lean Republican, Independent/Something else, Lean Democrat/Democrat)

This topline includes trended data, where applicable. The field dates and sample sizes for previous Axios/Ipsos American Health Index surveys are as follows:

Wave:	Interview dates:	Interviews:
Wave 5	May 31-June 3, 2024	1,042
Wave 4	February 16-20, 2024	1,247
Wave 3	August 11-14, 2023	1,162
Wave 2	May 12-15, 2023	1,095
Wave 1	February 17-21, 2023	1,213
