Table 11

QTSS. The 10 Year Health Plan is likely to include three key shifts for the NHS. To what extent do you support or oppose each of the following shifts being a top priority for the government?
- Making better use of technology: Examples include better computer systems to improve communication between NHS services so patients only have to tell their story once, and using technology more, such as AI for faster, more accurate diagnosis and robots for more effective treatment.
Base: Respondents in England only

Table 12

QTSS. The 10 Year Health Plan is likely to include three key shifts for the NHS. To what extent do you support or oppose each of the following shifts being a top priority for the government?
- Moving more care from hospitals to communities: This means providing more services like tests, scans, and treatments closer to where people live, in places like GP surgeries, pharmacies, local health centres, and in people's homes. This would allow hospitals to focus on the most serious illnesses and emergencies.

Table 19

QNCS. The social care system is facing significant challenges, with many people struggling to access the care they need. More people need to use social care services, but there's a shortage of care workers and concerns about the quality and consistency of care provided.
The Labour government's election manifesto promised to reform social care and create a new 'National Care Service', that aims to address challenges with access to care, staff shortages and consistency in care standards across the country.
Before today, were you aware of the government's promise to create a National Care Service?

QCROSSPART. The Labour government also promised to seek ‘cross-party consensus’ for social care reform. This means working with other political parties to agree on how to improve the social care system. While some experts argue this collaborative approach could lead to more widely accepted reforms that last for longer, others emphasise the urgent need for action given the current state of social care. Bearing this in mind, which of the following statements comes closest to your view on how the government should best tackle social care reform?

- A. The government should prioritise building cross-party consensus for social care reform, even if this means that it takes longer to deliver reforms to improve care services**
B. The government should prioritise delivering social care reform quickly to improve care services, even if this means that not all political parties agree with their reform plans
