Survey Methodology in detail

- This press release is based on the views of 3,600 randomly selected respondents. Interviews were conducted by trained Ipsos interviewers in the homes and home languages of respondents.
- Interviews were conducted from 25 November to 15 January – with a 2-week break over the festive period.
- A scientific process of multi-stage stratified random selection distributed interviews in all areas of the country, including deep rural areas. This methodology ensured that the results are representative of the views of the universe (adult South Africans) and that findings can be weighted and projected to the universe.
- Trained quantitative fieldworkers were responsible for the interviewing and CAPI (Computer-Assisted Personal Interviewing) was used.
- All results were collated and analysed in an aggregate format to protect the identity and confidentiality of respondents.
- All sample surveys are subject to a margin of error, determined by sample size, sampling methodology and response rate. The sample error for this sample at a 95% confidence level is a maximum of plus or minus 1.9%.
