

IPSOS POLITICAL MONITOR

April 2026

Voting Intention: April 2026

How do you intend to vote in the General Election? Will you vote...?

Base: 1,044 British adults 18+, 9-15 April 2026; Headline Voting Intention: all 9/10 certain to vote, always/usually/it depends vote in General Elections = **718**. Margin of error is displayed at +/- 4% All polls are subject to a wide range of potential sources of error. On the basis of the historical record of the polls at recent general elections, there is a 9 in 10 chance that the true value of a party's support lies within 4 points of the estimates provided by this poll, and a 2 in 3 chance that they lie within 2 points. This is especially important to keep in mind when calculating party lead figures.

Ipsos headline voting intention: Since the 2015 General Election

How would you vote if there were an election tomorrow?

Base: c. :800 British adults 18; Prior to September 2015 the turnout filter is "All certain to vote"; From July 2015 turnout filter is "all 9/10 certain to vote and always/usually/it depends vote in General Elections. Note small change in methodology in approach to prompting Brexit Party in July 2019 Note change in methodology from December 2024 to June 2025.

Headline voting intention among financial wellbeing segments

Base: 1,044 British adults 18+, 9-15 April 2026; Headline Voting Intention: all 9/10 certain to vote, always/usually/it depends vote in General Elections = 718; Comfortably off (198), Financially stable (173), Just about coping (179), Financially precarious/extremely vulnerable (141)

About the Ipsos Knowledge Panel©

Ipsos, part of the Ipsos group, is one of the UK's largest and most innovative research agencies, working for a wide range of global businesses and many government departments and public bodies.

The KnowledgePanel©, set up in 1999 in the US, 2020 in the UK, and since across Europe, is an online random probability panel.

In the UK, panellists aged 16+ are recruited via a postal push-to-web methodology. Invitations are sent to randomly selected addresses in the UK. Those who are digitally excluded are provided with a tablet and restricted internet access, free of cost. Our recruitment approach means all UK households in private residential settings have a known and non-zero chance of being invited to join the panel.

A high-quality random selection process is followed for all survey sampling. Panel members are randomly selected to take part in surveys. Data collection usually takes place over a week, online. Being a probability sample, quotas are not applied. Instead, the selected sample is stratified to ensure it is balanced on key characteristics. All those invited are allowed to take part in the survey.

METHODOLOGY

We interviewed a representative random sample of 1,044 British adults aged 18+ via the Ipsos UK KnowledgePanel©. Data was collected online between 9-15 April 2026. A sample of 2,253 adults aged 18+ were invited to take part in the survey. The sample was stratified by nation, age, qualifications and vote at the 2024 general election (as collected immediately after the election).

The achieved sample was weighted in two stages:

- Design weights were applied to correct for the unequal probabilities of a person being selected for a survey.
- Calibration weights were applied to correct for differential non-response. Data was weighted to the adult population profile on age and gender, region, ethnicity, qualifications, work status and sector (public sector/other), social grade (office coded), number of cars in household, constituency type and newspaper readership (print and digital). Population targets were obtained from the 2021/22 Census, ONS population estimates and other large probability surveys.

A two-part voting intention question is used with prompting on main parties (Conservative, Labour, Reform UK, Liberal Democrats, SNP in Scotland and Plaid Cymru in Wales) and a follow-up "squeeze" question of those who are undecided or refuse the first question. A turnout filter is used based on two questions: current stated likelihood to vote (at least 9 out of 10 certain to vote) and previous voting behaviour (if they say they "always" or "usually" vote in general elections or that "it depends").

Note that this is a new methodology implemented since June 2025. It involves a new form of data collection (online random probability panel instead of quota telephone survey), an updated voting intention (which involves prompting for Reform UK), and an updated weighting scheme. This is based on our learnings during and since the 2024 General Election. This means that comparisons with previous waves need to be made with caution. In particular, at this stage we are not making direct comparisons with previous satisfaction ratings for opposition party leaders. As always, we continually review our methods, and may make further changes to our methodology in the future.
