

A close-up photograph of a green leaf, showing a detailed network of veins. The central vein is the most prominent, with smaller veins branching off it. The leaf's surface has a fine, textured appearance.

'Natural'

What does it mean to consumers?

April 2018

Russia

The 'Natural' trend

Consumers are more conscious than ever about the safety and trustworthiness of food and drink, which has led to an increase in the use of natural, as well as ethical and environmental claims in food and drink innovation.

In the Mintel Global New Product database, natural product claims (which include no additives, preservatives, organic and GMO free) appear in 29% of global food and drink launches (Sep 2016-Aug 2017). This is an increase from 17% from the claims we saw between September 2006 – Aug 2007.

Food and Drink manufacturers are having to become more open about their ingredients, production processes, and supply chains.

Ultimately, this helps consumers feel more confident about the safety and purity of the food and drink that they purchase

Kale-O's Sweet Chilli and Mint Kale crisps are organic green kale leaves with fresh mint, cayenne chilli and olive oil dressing. It is free from gluten, nuts, trans fats and is organic. The packet is also compostable
