

Liberals Lead Conservatives as Best Able to Manage Canadian Energy and Resources

Which party and leader would do the best job at managing Canada's energy and resources to...

Mark Carney and the Liberal Party lead Pierre Poilievre and the Conservatives on all aspects of managing Canadian energy and resources. The Liberals are ahead of the Conservatives when it comes to managing our energy and resources to **create jobs and grow the economy**, to ensure that we **proceed in an environmentally responsible and sustainable manner**, and in **balancing economic and environmental concerns**.

The Liberals currently lead in every region of the country except Alberta on the question of who is best to manage Canada's energy and resources "to balance both economic opportunities and environmental concerns." And even in

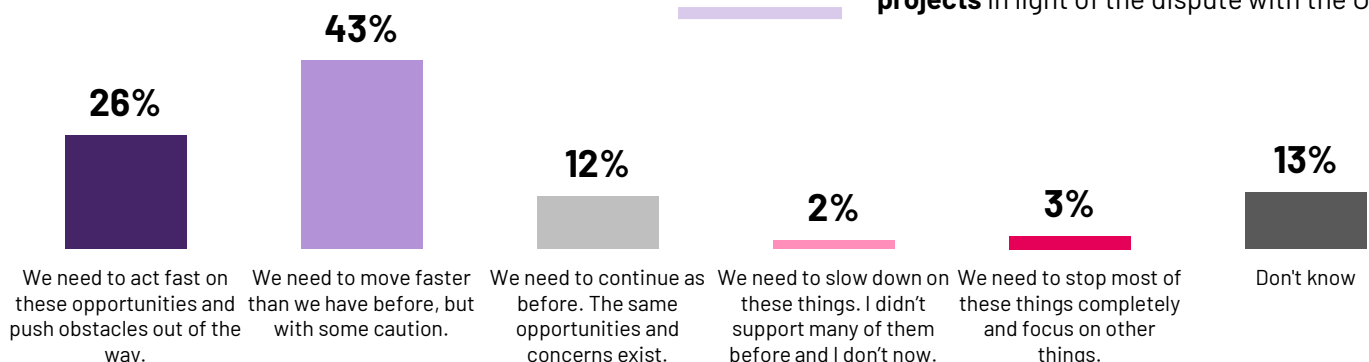

Alberta, the Conservatives only have a statistically insignificant 4-point advantage over the Liberals (Conservatives 41% vs. Liberals 37%).

This Liberal advantage is especially important in an environment in which a significant majority of Canadians say they support acting more quickly to on opportunities for developing energy and resource projects.

The appetite for moving faster on projects is well above majority levels in all regions of the country, although higher in BC (78%) and Alberta (77%) than in Quebec (64%) or Manitoba/Saskatchewan (63%).

Support for faster development of energy/resource projects

69% Say we need to act **faster on opportunities for developing energy and resource projects** in light of the dispute with the U.S.

Q: Which of the following best reflects your own view as to how Canada should proceed with developing energy and resource projects in light of Canada's trade and sovereignty disputes with the US?

About The Study

These are some of the findings of an Ipsos poll conducted between April 1st and 3rd, 2025, on behalf of Global News. For this survey, a sample of n=1,000 Canadians aged 18+ was interviewed online, via the Ipsos I-Say panel and non-panel sources, and respondents earn a nominal incentive for their participation. Quotas and weighting were employed to balance demographics to ensure that the sample's composition reflects that of the adult population according to Census data and to provide results intended to approximate the sample universe. The precision of Ipsos polls which include non-probability sampling is measured using a credibility interval. In this case, the poll is accurate to within ± 3.8 percentage points, 19 times out of 20, had all Canadians been polled. The credibility interval will be wider among subsets of the population. All sample surveys and polls may be subject to other sources of error, including, but not limited to coverage error, and measurement error. Ipsos abides by the disclosure standards established by the CRIC, found here: <https://canadianresearchinsightscouncil.ca/standards/>
