

## Ipsos MORI May Political Monitor

### Topline Results

Fieldwork: 12 - 14 May 2012

CON 33 (-2); LAB 43 (+5); LIB DEM 9 (-3)

#### Technical Details

Ipsos MORI interviewed a representative sample of 1,006 adults aged 18+ across Great Britain. Interviews were conducted by telephone 12<sup>th</sup> to 14<sup>th</sup> May 2012. Data are weighted to match the profile of the population.

Where percentages do not sum to 100 this may be due to computer rounding, the exclusion of "don't know" categories, or multiple answers. An asterisk (\*) denotes any value of less than half a per cent. Voting intention figures exclude those who say they would not vote, are undecided or refuse to name a party and in the headline figures, those who are not absolutely certain to vote. Data are based on all adults unless otherwise stated.

## Voting intention

Voting intention polls between elections are a measurement of how a representative sample of the public think they would vote at a given point in time. Voting intentions in "peacetime" (non-election periods, such as this one) should be regarded as useful indicators of the political mood rather than predictions of a future electoral result. Voting intentions should be read in conjunction with other political indicators.

### Voting intentions: those "absolutely certain to vote"

We regard the voting intentions of those "absolutely certain to vote" as the most useful trend indicator, since it includes only those voters whose frame of mind is nearest to those who actually vote at elections. Please note that this measure is not based on the assumption that this is the group who will vote at the next general election, as this population are not accurately identifiable at this stage of a parliament.

Please also note that the 'margin of error' on these figures is c.±4% for each figure; this means that a party share figure of 30% could actually fall anywhere between 26% and 34%, though it is far more likely to fall at 30% than at the extreme ends of this range. This is especially important to keep in mind when calculating party lead figures.

Almost six in ten, 55%, say they are 'absolutely certain to vote' in an immediate General Election.

**Voting intentions: all naming a party**

The voting intention figures based on all those giving a voting intention is the measure with the longest pedigree; our regular trends on this basis go back to the 1970s. When turnouts were much higher than is usual today, this offered a good approximation to actual voting behaviour; in more recent years it has over-represented Labour’s real electoral strength, since more supporters of Labour than of other parties fail to vote.
