

## Methodology

These are the findings of the **Global @dvisor Wave 20 (G@20)**, an Ipsos survey conducted between **April 6th and April 21st**.

The survey instrument is conducted monthly in 24 countries around the world via the Ipsos Online Panel system. The countries reporting herein are Argentina, Australia, Belgium, Brazil, Canada, China, France, Great Britain, Germany, Hungary, India, Indonesia, Italy, Japan, Mexico, Poland, Russia, Saudi Arabia, South Africa, South Korea, Spain, Sweden, Turkey and the United States of America.

For the results of the survey presented herein, an international sample of 18,787 adults aged 18-64 in the US and Canada, and age 16-64 in all other countries, were interviewed. Approximately 1000+ individuals participated on a country by country basis via the Ipsos Online Panel with the exception of Argentina, Belgium, Indonesia, Mexico, Poland, Saudi Arabia, South Africa, South Korea, Sweden and Turkey, where each have a sample approximately 500+.

Weighting was then employed to balance demographics and ensure that the sample's composition reflects that of the adult population according to the most recent country Census data, and to provide results intended to approximate the sample universe. A survey with an unweighted probability sample of this size and a 100% response rate would have an estimated margin of error of +/-3.1 percentage points for a sample of 1,000 and an estimated margin of error of +/- 4.5 percentage points 19 times out of 20 per country of what the results would have been had the entire population of adults in that country had been polled. All sample surveys and polls may be subject to other sources of error, including, but not limited to coverage error, and measurement error.

<a href="#">562</a>	CK10. Which is closer to your point of view? Some/other people say that what happened in Japan was an unforeseeable and isolated event so that there really is nothing that should stop the nuclear industry from continuing to build and operate nuclear plants to produce electricity in other parts of the world.. Other/some people say that what happened at the nuclear plant in Japan demonstrates that all nuclear facilities are vulnerable to unforeseen events that could have a deadly impact on those who live in and around them. As a result we should stop all further plans to build nuclear plants anywhere.

SECTION CK: NUCLEAR

CK10. Which is closer to your point of view? Some/other people say that what happened in Japan was an unforeseeable and isolated event so that there really is nothing that should stop the nuclear industry from continuing to build and operate nuclear plants to produce electricity in other parts of the world.. Other/some people say that what happened at the nuclear plant in Japan demonstrates that all nuclear facilities are vulnerable to unforeseen events that could have a deadly impact on those who live in and around them. As a result we should stop all further plans to build nuclear plants anywhere.

CK10. Which is closer to your point of view? Some/other people say that what happened in Japan was an unforeseeable and isolated event so that there really is nothing that should stop the nuclear industry from continuing to build and operate nuclear plants to produce electricity in other parts of the world.. Other/some people say that what happened at the nuclear plant in Japan demonstrates that all nuclear facilities are vulnerable to unforeseen events that could have a deadly impact on those who live in and around them. As a result we should stop all further plans to build nuclear plants anywhere.

SECTION CK: NUCLEAR

CK10. Which is closer to your point of view? Some/other people say that what happened in Japan was an unforeseeable and isolated event so that there really is nothing that should stop the nuclear industry from continuing to build and operate nuclear plants to produce electricity in other parts of the world. Other/some people say that what happened at the nuclear plant in Japan demonstrates that all nuclear facilities are vulnerable to unforeseen events that could have a deadly impact on those who live in and around them. As a result we should stop all further plans to build nuclear plants anywhere.

SECTION CK: NUCLEAR

CK10. Which is closer to your point of view? Some/other people say that what happened in Japan was an unforeseeable and isolated event so that there really is nothing that should stop the nuclear industry from continuing to build and operate nuclear plants to produce electricity in other parts of the world.. Other/some people say that what happened at the nuclear plant in Japan demonstrates that all nuclear facilities are vulnerable to unforeseen events that could have a deadly impact on those who live in and around them. As a result we should stop all further plans to build nuclear plants anywhere.

SECTION CK: NUCLEAR

CK10. Which is closer to your point of view? Some/other people say that what happened in Japan was an unforeseeableand isolated event so that there really is nothing that should stop the nuclear industry from continuing to build and operate nuclear plants to produce electricity in other parts of the world.. Other/some people say that what happened at the nuclear plant in Japan demonstrates that all nuclear facilities are vulnerable to unforeseenevents that could have a deadly impact on those who live in and around them. As a result we should stop all further plans to build nuclear plants anywhere.
