

These are findings from an Ipsos poll conducted for Thomson Reuters from January 10-14, 2014. For the survey, a sample of 1,245 Americans, including 455 Democrats, 461 Republicans, and 183 Independents ages 18+ were interviewed online. The precision of the Reuters/Ipsos online polls is measured using a [credibility interval](#). In this case, the poll has a credibility interval of plus or minus 3.2 percentage points for all adults, 5.2 percentage points for Democrats, 5.2 percentage points for Republicans, and 8.3 percentage points for Independents. For more information about credibility intervals, please see the appendix.

The data were weighted to the U.S. current population data by gender, age, education, and ethnicity. Statistical margins of error are not applicable to online polls. All sample surveys and polls may be subject to other sources of error, including, but not limited to coverage error and measurement error. Figures marked by an asterisk (*) indicate a percentage value of greater than zero but less than one half of one per cent. Where figures do not sum to 100, this is due to the effects of rounding. To see more information on this and other Reuters/Ipsos polls, please visit <http://polling.reuters.com/>.

CORE POLITICAL APPROVAL

Q1. Generally speaking, would you say things in this country are heading in the right direction, or are they off on the wrong track?

	All adults	Democrats	Republicans	Independents
Right direction	20%	37%	11%	12%
Wrong track	62%	43%	84%	77%
Don't know	18%	20%	5%	11%

Q2. Overall, do you approve or disapprove about the way Barack Obama is handling his job as President?

Q2a. Is that strongly (approve/disapprove) or somewhat (approve/disapprove)? (Asked of those who selected "approve" or "disapprove") Q2b. If you had to choose, do you lean more towards approve or disapprove? (Asked of those who selected "don't know")

	All adults	Democrats	Republicans	Independents
Strongly approve	15%	31%	2%	12%
Somewhat approve	18%	31%	8%	13%
Lean towards approve	7%	10%	3%	2%
Lean towards disapprove	4%	3%	4%	4%
Somewhat disapprove	13%	11%	12%	18%
Strongly disapprove	36%	10%	70%	46%
Not sure	6%	5%	1%	4%
Total approve	40%	72%	14%	27%
Total disapprove	53%	24%	85%	69%

Q3. In your opinion, which political party has a better plan, policy or approach to each of the following? (Data based on interviewing from January 5- 14, 2014; n=721)

All adults (n=721)	<u>Democratic Party</u>	<u>Republican Party</u>	<u>Independents</u>	<u>Other</u>	<u>None</u>	<u>Don't know</u>
Healthcare	26%	21%	12%	3%	15%	23%
The war on terror	21%	20%	6%	3%	19%	30%
Iran	14%	19%	9%	3%	18%	37%
The US Economy	22%	21%	11%	2%	17%	27%
Immigration	24%	20%	8%	3%	15%	30%
Social Security	25%	18%	9%	3%	19%	28%
Medicare	25%	15%	12%	3%	16%	28%
Taxes	23%	23%	8%	3%	18%	25%
Gay marriage	34%	12%	9%	3%	15%	27%
Jobs and employment	22%	20%	12%	3%	19%	24%
The federal government deficit	19%	20%	10%	3%	21%	27%
Supporting small businesses	24%	22%	10%	2%	12%	29%
Education	28%	17%	10%	4%	15%	27%
Foreign policy	19%	20%	10%	3%	15%	33%
Women's rights	33%	11%	10%	3%	14%	30%
The environment	31%	10%	13%	3%	16%	27%
Israel	15%	20%	8%	2%	16%	39%
Syria	15%	16%	7%	2%	19%	40%

PARTY ID	<u>All Adults</u>
Strong Democrat	12%
Moderate Democrat	19%
Lean Democrat	7%
Lean Republican	9%
Moderate Republican	13%
Strong Republican	8%
Independent	16%
None of these	9%
Don't know	7%
<i>Total Democrat</i>	<i>38%</i>
<i>Total Republican</i>	<i>30%</i>

How to Calculate Bayesian Credibility Intervals

The calculation of credibility intervals assumes that Y has a binomial distribution conditioned on the parameter θ , i.e., $Y|\theta \sim \text{Bin}(n, \theta)$, where n is the size of our sample. In this setting, Y counts the number of “yes”, or “1”, observed in the sample, so that the sample mean ($\bar{y}$) is a natural estimate of the true population proportion θ . This model is often called the likelihood function, and it is a standard concept in both the Bayesian and the Classical framework. The Bayesian ¹ statistics combines both the prior distribution and the likelihood function to create a posterior distribution. The posterior distribution represents our opinion about which are the plausible values for θ adjusted after observing the sample data. In reality, the posterior distribution is one’s knowledge base updated using the latest survey information. For the prior and likelihood functions specified here, the posterior distribution is also a beta distribution ($\pi(\theta/y) \sim \beta(y+a, n-y+b)$), but with updated hyper-parameters.

Our credibility interval for ϑ is based on this posterior distribution. As mentioned above, these intervals represent our belief about which are the most plausible values for ϑ given our updated knowledge base. There are different ways to calculate these intervals based on $\pi(\theta/y)$. Since we want only one measure of precision for all variables in the survey, analogous to what is done within the Classical framework, we will compute the largest possible credibility interval for any observed sample. The worst case occurs when we assume that $a=1$ and $b=1$ and $y=n/2$. Using a simple approximation of the posterior by the normal distribution, the 95% credibility interval is given by, approximately:

$$\bar{y} \pm \frac{1}{\sqrt{n}}$$

For this poll, the Bayesian Credibility Interval was adjusted using standard weighting design effect $1+L=1.3$ to account for complex weighting²

Examples of credibility intervals for different base sizes are below. Ipsos does not publish data for base sizes (sample sizes) below 100.

Sample size	Credibility intervals
2,000	2.5
1,500	2.9
1,000	3.5
750	4.1
500	5.0
350	6.0
200	7.9
100	11.2
