Now, I'd like to ask you some questions on a new topic. Please listen closely to the following information. I'll be asking you some questions about it. If you need me to re-read this information at any time, please ask.

In the 1960s extensive testing of the chemical "Agent Orange" was conducted by the Canadian and US military at a Canadian military base called Gagetown, in New Brunswick. Agent Orange is a defoliant (dee-fohl-ee-ant), which means that it strips the leaves from trees. Medical experts have now shown that Agent Orange can cause cancer and other illnesses in humans.

A number of soldiers and civilians who were living in the Gagetown area at the time of the tests are now claiming that their exposure to Agent Orange in the 1960s has made them seriously ill, and that they should receive compensation from the Canadian government. The Canadian government has said that many of these claims are not valid and has refused to pay compensation. Now, I'd like to read you some statements about this issue. For each one, tell me if you strongly agree, somewhat agree, somewhat disagree, or strongly disagree or disagree with each:

While I sympathize with people who are sick, there's probably other more significant reasons for their illness than being exposed to Agent Orange in the 1960s?
