OV1. Each year the Canadian government allocates some of its budget to assist in areas of the world that are less fortunate than Canada. One area where many call for continued action is around fighting HIV and AIDS around the world, where aid typically goes towards such causes as increasing access to healthcare and medicine, reducing poverty and increasing awareness of the disease and how it is transmitted. Thinking about Canada's contributions to foreign aid, how important is it that the Canadian government help increase access to treatment for people living with HIV and AIDS in developing countries?
