Detailed tables

Q23. Living off the Grid' refers to living in a self-sufficient manner without reliance on one or more public utilities. To live off the grid means that the home generates its own power through solar panels and wind generation. It allows a home to produce all its own energy independent from the municipal systems. Is 'living off the grid' something that you would consider?

RBC Fall Reno Study 2008 (60-6155-27)

Detailed tables

Q25b. Net Zero homes are home that independently generate as much, if not more energy, than they draw from the municipal grid on an annual basis. While at times during the year the house does not produce enough energy and takes energy from the municipal grid, at other times the house will produce more energy than it needs and actually gives some of that energy back to the municipal grid. Overall, a home that has a 'Net zero' home energy consumption means that its net energy consumption from the municipal grid is zero over a typical year. Is being a net zero household something that you would consider?
