As you may know, The Supreme Court of Canada recently ruled that competent Canadians will soon have the right to a physician's assistance to die. Adults with a grievous and irremediable medical condition (due to illness, injury or disability) that causes enduring suffering that is intolerable to the individual, and who clearly consent to the termination of their life, will soon have the right to a physician's assistance to die. Do you support or oppose the Supreme Court's decision?

When implemented, the Supreme Court's decision will allow physician-assisted dying for patients who are competent at the time of the request and at the time the request is carried out. It does not address physician-assisted dying for patients who are competent at the time of the request, but not at the time the request is to be carried out (i.e. in a coma or late-stage dementia). Which of the following is closest to your point of view?

Assuming the patient meets all the other criteria for an assisted death and has otherwise been approved, would you support or oppose physician-assisted dying for patients who have a scheduled assisted death and who are competent at the time of the request but not competent at the time the assisted death is to be carried out? For example, a patient and her doctor agree on Friday to schedule an assisted death on the following Monday, but over the weekend the patient slips into a coma.

Assuming the patient meets all the other criteria for a physician assisted death, would you support or oppose physician assisted death for patients who are competent at the time of the request but not competent at the time the request is carried out, as long as the person has a diagnosis of a grievous and irremediable medical condition when the request is made? For example, if a patient has a diagnosis of dementia and requests to have assistance to die when they become bedridden and unable to bathe, shave and toilet themselves, but is no longer competent when these conditions arise.

Would you support physician assisted dying for patients who are competent at the time of the request even if they do not have a grievous and irremediable medical condition? For example, a person may wish to write advance instructions specifying that they are to receive an assisted death if they have a stroke and are unable to move or communicate, even if they have not been diagnosed as at risk of having a stroke when they write their advance instructions.
